

PROVIDING SOLUTIONS FOR YOUR BUSINESS.

Overview

Overview

Nimbus continues to enhance its Optimum product in line with “best practice”, version 6.08.1 is our latest release which continues to protect your investment now and into the future

If you are on 6.07 or less there are other features you will need to consider. Please contact us for further information

New productivity features

Upgraded reporting

Reports are backward compatible, thereby protecting your current investment plus many enhanced features such as:

- The ability to embed photos in each line of a report
- Paged reports just like a browser
- Page and report totals on columns
- Locking of headers so they remain visible at all times.
- Limit the number of matching records the server will fetch and display to the user (assists in balancing the load on your server).
- Multi-sort reports allowing multiple column sorts for granular reporting.
- Choose a default style for reports to better suit your needs.
- Configure reports to display relevant header links where supporting data is present.
- Set a tool tip to explain the links
- Hide a link when data is not possible
- Limit the number of matching records a user can export
- New flag option for GST zero rated transactions with no GST charged on creditors
- Debtors GST exempt is now supported in transaction posting
- Forms open in the centre of a users screen

- Show/hide certain tabs on forms
- HTML printing supports portrait and landscape templates
- Google maps can be incorporated into Nimbus with an API link
- The ‘Header Details Table’ can be configured to:
 - Show or not show empty fields
 - Show or hide the table using a minimise header button
 - Select the number of fields from the header to show in one column until splitting it into the next column
 - Select the number of columns to create when splitting the view fields into multiple columns This will save valuable real estate on the page

Updated time recording application

Time recording now uses an updated application that integrates with both scheduler and the Visual Project Planner

Time Slot Increments

Added a time slot increment setting for posting forms in the pop up date/time calendar

Check List Order By Options

Added an order by option for the checklist so it can either be in primary key order or alphabetical order

New productivity features

Menu Items

Ability to set menu items in alphabetical order

Updated scheduler code

Integrates with the new Visual Project Planner (VPP) to help you manage projects, jobs and equipment more accurately

Option to auto generate start time and end time using business hours only

Configured to disallow a user to swap x and y axis within a schedule

Can be sorted by start time rather than ID's

Visual Project Planner, a Gantt type viewer

Provides the most important features of a Gantt viewer with in-line editing for such items as:

- Start/End time; Project/job/task name; duration; task order
- Edit of Nimbus project data from a visual layout, Allowing you to review and edit dependencies right down to individual tasks (if entered) to verify that a project is on track
- Manage project dependencies visually
- Easily review all project dependencies and see if a project is going to be achievable by planned/promised timeline
- Caters for both productive and non-productive tasks. Can help ensure you have made allowances for non-project work like employee training; leave; cleaning of workshop etc. Tasks that might otherwise derail a project timeline are now visible
- Allows printing to PDF
- Provides people out on the job with a printed overview of the job timeline or better still attach as a document to your Nimbus mobile application

Protection and locking facilities

This has been introduced to protect both Client and Nimbus databases. The Client Lock provides the ability to lock forms, reports and views to stop them being overwritten in either an import or an upgrade. This protects site specific changes being overwritten. The Nimbus Lock provides the same ability to Nimbus Masters on Client sites. Any attempt to edit, results in a warning being given

VISUAL PROJECT
PLANNER

ENHANCED
REPORTING
CAPABILITY¹

IMPROVEMENTS TO
UPGRADE APPLICATION
AND PROCESS

DATA CLEAR VIA
TABLES

Keyboards shortcuts on webforms

You now have the option to use keystrokes to move around a form as an alternative to using your mouse to click from field to field

Upgrade application²

Automates a lot of the steps the consultants do when performing an upgrade, meaning less downtime, less cost and a faster return to normal business

² Subject to scoping – some legacy applications may require consulting input

Technology

- **Supports Chrome browser**
By supporting Google Chrome, Nimbus is future proofing your investment
- **Fast reporting**
Advances in browser technology means using Chrome results in a much improved reporting speed
- **Updated intranet**
By continually updating the intranet Nimbus is not only protecting your investment, it is ensuring it can take advantage of technology change as they come along
